EDUCATION

Simon Fraser University

Bachelor of Science, Data Science

Burnaby, BC

Expected May 2028

- Coursework: Data Structures & Algorithms, Software Engineering, Databases, Artificial Intelligence

EXPERIENCE

Software Developer Intern

SAP

Sept. 2026 – Present

Vancouver, BC

- Contributing to the migration of a monolithic Spring Boot application to microservices by refactoring backend logic into standalone services with dedicated REST endpoints
- Building frontend features in Vue 3 with Pinia and Vue Router, connecting components to newly separated service APIs to keep the user experience consistent during the migration
- Delivering new features for internal stakeholders by collaborating with product managers, DevOps, and QA across Agile sprints, taking tickets from requirements through testing and deployment

PROJECTS

Syllabyss | *Next.js, PostgreSQL, TimescaleDB, LangGraph, Clerk, Docker*

Oct. 2026

- Built an AI platform that turns uploaded course materials into 6 study games through a Gemini structured-output pipeline, with a second verification pass confirming 98% of cited answer evidence
- Engineered a server-authoritative game engine with typo-tolerant SQL answer matching, streaming every guess into a TimescaleDB hypertable that drives real-time leaderboards through continuous aggregates
- Developed a custom Markov learner model extending Bayesian Knowledge Tracing that replays live TimescaleDB history across 22 concepts, feeding mastery and root-cause context to a LangGraph agent

Solar Calculator & Recommendation System | *Spring Boot, PostgreSQL, Docker*

Apr. 2026

- Shipped a full-stack solar charge-controller sizing tool to Xantrex across 3 Agile sprints; the client acquired the project and deployed it to their customer base
- Built a PostgreSQL-backed recommendation engine cross-referencing solar configurations against NEC constraints and a live product catalog, cutting manual sizing to one form submission
- Containerized with Docker and added role-based auth via Spring Security with BCrypt hashing and JDBC sessions, letting the client manage admin and customer access post-handoff

SFU CareerConnect | *Next.js, React, MongoDB, Redis, Gemini API, Google OAuth*

Jan. 2026

- Built an AI internship matching platform ranking live job postings against a user's resume through a multi-phase Gemini pipeline, returning matches in under 15 seconds
- Architected a serverless REST API on Next.js App Router with MongoDB and a Redis caching tier (30-min session, 24-hr listing TTLs), cutting redundant API calls under load
- Streamed live pipeline status over the Web Streams API and added round-robin key rotation, sustaining full throughput at peak usage with no rate limit errors

EXTRACURRICULARS

Webmaster, SFU Student Energy Club

Simon Fraser University

Dec. 2025 – Present

Burnaby, BC

- Redesigned and maintained the club website in HTML, CSS, and JavaScript, shipping updates weekly
- Coordinated with a team of 3 and marketing leads to gather content requirements and ship updates

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, Python, SQL

Frameworks & Libraries: React.js, Next.js, Spring Boot, Express.js, Node.js, FastAPI, scikit-learn, NumPy

Databases & Caching: PostgreSQL, MongoDB, Redis

Developer Tools: Git, GitHub, Docker, Jupyter, Vercel, Render, Claude Code
